SUMMARY

Experienced Senior Software Engineer with a strong background in full-stack web application development. Also experienced in developing backend tools, databases, and stand-alone applications for multiple operating systems.

- Joined Amazon.com in its early stages. Developed Amazon's core shipping software, reducing shipping time from 30 seconds per package to under 4 seconds (an 86.7% improvement). Played a key role in opening 11 distribution centers and led a team of three engineers.
- Wrote Airworthiness Certification Services Process & Artifact Compliance Tool (PACT) from the ground up in Ruby on Rails both front and back end including database design and implementation.
- Managed all Electronic Data Interchange (EDI) at CUSO Financial Services, overseeing the daily reporting of billions of dollars in client positions and broker commissions.

SKILLS

Languages:	Ruby on Rails, Python, JavaScript, TypeScript, HTML, CSS / SCSS, Java, C++, C, C#
Databases:	PostgreSQL, MySQL, SQL Server, MongoDB, Oracle SQL, Redshift
AI:	GitHub Copilot, Claude, ChatGPT
Frontend:	Rails ERB, JBuilder, ReactJS, Angular, jQuery, Bootstrap, Turbo Frames, NodeJS, .NET
OSes:	OSX, Windows, Debian, Ubuntu
Tools:	Visual Studio, RubyMine, PyCharm, Eclipse, Jira / Confluence, Azure DevOps, Git / GitHub / GitLab, Docker, Datadog
Servers:	Apache, Tomcat, Puma, IIS, Nginx
Methodologies:	Bitemporal Modeling, Polymorphic Modeling, Agile Development, MVC, CI / CD, TDD, SaaS, RESTful Services
Other:	AWS, Postman, Datadog, MVC, CRUD, APIs, AJAX, JSON, XML, Redis, Sidekiq, Front-end, Back-end, Web Design, Communications, Mentoring, Management

PROFESSIONAL EXPERIENCE

NAVA PBC, Washington, DC
Senior Software Engineer, L6 Apr 2025 – Oct 2026

- Spent a year on the Staff team for the Minnesota Paid Leave website, building backend REST APIs for state staff using Salesforce. Work covered appeals, financial and amended leave determinations, benefit adjustments and requests for information, using Pundit, JBuilder, audit logging and S3 attachments.
- Designed core benefit and payment models: weekly hour reporting, per-employer leave balances, intermittent leave tracking and a bitemporal mailing address service.
- Strengthened fraud and audit controls with a polymorphic FraudFlag, soft-delete and transactional audit logs, and a unified, versioned email notification service.
- Improved production performance and data integrity with database indexes, N+1 fixes, Prosopite query logging, a Terraform/CloudWatch alarm and data-check rake tasks.
- Shipped applicant portal features (Documents hub, overpayment and underpayment banners, HEIC-to-JPG conversion, driver's license validation) and fixed form validation bugs.
- Merged 118 PRs on the Staff team, about 1 every 2.1 business days. Received a performance bonus.

VettaFi LLC, New York, NY
Senior Software Engineer Mar 2023 – Aug 2024

- Developed VettaFi's Investor Behavioral Intelligence Platform (IBI), a Rails application that generates summarized data for ETF indexes, advisors, and webcasts.
- Collaborated with a team of 4-12 other engineers on IBI in an agile environment, handling 1-week sprints.
- Wrote dozens of test scripts (RSpec) and performed dozens of code reviews.
- Maintained (added new pages, updated existing pages, increased performance) VettaFi's other existing websites (Vettafi.com, ETFTrends.com, ETFDB.com) that handle thousands of users.
- Implemented APIs to integrate millions of rows of data stored on an AWS Redshift database to support VettaFi's websites.

Entrision LLC, Milwaukee, WI
Senior Software Engineer Jun 2022 – Mar 2023

- Built features for Terminus' Email Experience, a Rails-based SaaS application.
- Integrated Terminus' Email Experience with platforms like Salesforce, Google, HubSpot, and Marketo.
- Coordinated with 4-8 other engineers to develop solutions in an agile environment.

Airworthiness Certification Services LLC, Gig Harbor, WA
Senior Software Engineer Jun 2019 – Jun 2022

- Led development of Patmos' Process & Artifact Compliance Tool (PACT), a web application that supports DO-178/DO-254 certification.
- Wrote PACT in Ruby on Rails from the ground up including the database design/integration, back-end, and front-end.
- Developed the Tool Qualification Plan and Software Verification and Validation Plan for PACT.
- Supported Airworthiness Certification Services (ACS) legacy IIS web application.
- Managed Patmos hardware, networks, GitLab server, and backup/archival system.

CUSO Financial Services LP, San Diego, CA
Senior Software Engineer Jun 2004 – Jun 2019

- Enhanced dataVISION, Orcas Net's proprietary web-based CRM application that handles tens of thousands of Advisor commissions and Investor positions.
- Aided in the conversion from the legacy system to Ruby on Rails.
- Designed and implemented the system used to transfer financial data from data aggregators into dataVISION.
- Automated dataVISION's EDI/ETL systems including writing web-scraping "robots" to import data from providers that did not provide an FTP or API interface. This interface handled billions of dollars in clients' positions and advisors' commissions daily.
- Administered hardware and networks at OrcasNet's local office (the company that was acquired by CUSO).

Knowledgeware Systems LLC, Eastsound, WA
CEO Feb 2001 – Jun 2004

- Hired, trained and supervised engineers.
- Developed a Natural Language Engine in C++.
- Provided hardware and DevOps support.

Amazon.com Inc, Seattle, WA
Technical Lead Feb 1998 – Feb 2001

- Coded in C, Perl & SQL to design and implement all shipping software that Amazon.com used at the time. At peak load, the system shipped about half a million packages a day (hundreds of packages a minute) and ran 24/7 365 days a year.
- Improved shipping time **from 30 seconds down to less than 4 seconds (an 85% reduction).**
- Wrote the software for a Client/Server-based real-time automated package processing and labeling system (SLAM).
- Created "*Smart Manifest*" a shipping cost calculating system that automatically balanced cost, speed, and carrier reliability.
- Acted as a major contributor in the opening of Amazon's Music, Video, Toys, and Consumer Electronics stores.
- Facilitated the opening of 11 different DCs (including 4 international). Opened the fastest of these in just a few days.
- Led a team of 3 other engineers.
- Awarded a "*Just Do It*" award for overall accomplishments at Amazon.com.

OPEN SOURCE

Jump Start Server — Creator | https://github.com/PaulCarrick/jump-start-website | https://paul-carrick.com/jump-start

- Built a self-hosted Ruby on Rails website builder that lets users create pages, manage navigation, and publish blog posts without writing code.
- Coded in Ruby on Rails with React.JS, TypeScript, and Python.
- Packaged the application for Docker and Debian and deployed it on AWS LightSail to run my personal website.

Bible and Beyond — Creator | https://github.com/PaulCarrick/bible-and-beyond.com | https://bible-and-beyond.com/

- Built a free, noncommercial website without adds. This is customizable for churches to use freely to augment their websites.
- Coded in Python, Drupal/PHP with React.JS, TypeScript on the front end.
- Packaged the application for Docker and Debian and deployed it on AWS LightSail to run bible-and-beyond.com

EDUCATION

A.A. in Psychology, College of the Canyons, Valencia, CA, 1979
B.S.C.S. Computer Science, California State University at Northridge, 1981

AWARDS

"Just Do it" Award, Amazon.com, 2000
